

Appendix 11 - Daylight Angles

This Appendix indicates the method of calculating Daylight Angles. It is referred to in rules for each Environment relating to buildings and aerals.

H = Maximum height of building or aerial and/or aerial support structure at any point.

Hd = Horizontal distance from boundary to point being measured.

Diagrammatic Examples of Daylight Angles

Note:

The angle of inclination of a recession plane X° from horizontal depends on the orientation of the boundary concerned as per the recession plane indicator below.

Recession Plane Indicator
