

List of Licensed Contractors for Water Supply

Water Services requires contractors carrying out work on water supply assets to be approved by Council. There are two types of approved contractors: Registered Contractors and Licensed Contractors for Water Supply.

A **registered contractor** is permitted to construct or modify new water reticulation (including reticulation that will be transferred to council ownership). They may not carry out work on live mains, make connections to live mains, install a water meter or carry out shut downs of live water reticulation.

A **licensed contractor** may in addition to the above carry out work on live mains, including connections to the live reticulation.

For a list of Registered Contractors refer to Kete link [WATER-1227306924-168](#)
